

IN THE CLAIMS:

Claims 1-24, 27-30, 35, 36, 41, and 42 were previously cancelled. Claims 25, 26, 33, 34, 39, 40 and 47 have been amended herein. All of the pending claims are presented below. This listing of claims will replace all prior versions and listings of claims in the application. Please enter these claims as amended.

Listing of Claims:

1.-24. (Cancelled)

25. (Currently amended) An intermediate structure in the formation of an isolation structure for a semiconductor device, comprising:
a semiconductor substrate having at least a portion free of field oxide structures and having a first surface and a second surface, said first surface opposing said second surface;
at least one p-well and at least one n-well on said ~~substrate~~ first surface of said substrate;
at least one activated, anneal p-type area within said at least one n-well and at least one activated, annealed n-type area within said at least one p-well; and
a substantially dopant-free, uninterrupted diffusion barrier layer extending over said first surface and said second surface of said semiconductor substrate, said substantially dopant-free, uninterrupted diffusion barrier layer encapsulating said semiconductor substrate.

26. (Currently amended) The structure of ~~claim 25~~ claim 25, further comprising a layer of oxide between said ~~substrate~~ first surface of said substrate and said substantially dopant-free, uninterrupted diffusion barrier layer.

27.-30. (Cancelled)

31. (Previously presented) The structure of claim 25, wherein said substantially dopant-free, uninterrupted diffusion barrier layer is silicon nitride.

32. (Previously presented) The structure of claim 25, wherein said substantially dopant-free, uninterrupted diffusion barrier layer is silicon oxynitride.

33. (Currently amended) An intermediate structure in the formation of an isolation structure for a semiconductor device, comprising:
a semiconductor substrate having at least a portion free of field oxide structures having a first surface and a second surface, said first surface opposing said second surface;
at least one p-well and at least one n-well on said ~~substrate~~ first surface of said substrate;
at least one activated, annealed doped area within at least one of said at least one n-well and said at least one p-well; and
a substantially dopant-free, uninterrupted diffusion barrier layer extending over said first surface and said second surface of said semiconductor substrate, said substantially dopant-free, uninterrupted diffusion barrier layer encapsulating said semiconductor substrate.

34. (Currently amended) The structure of ~~claim 33~~ claim 33, further comprising a layer of oxide between said ~~substrate~~ first surface of said substrate and said substantially dopant-free, uninterrupted diffusion barrier layer.

35. (Cancelled)

36. (Cancelled)

37. (Previously presented) The structure of claim 33, wherein said substantially dopant-free, uninterrupted diffusion barrier layer comprises one of the group consisting of silicon nitride and silicon oxynitride.

38. (Previously presented) The structure of claim 33, wherein said at least one activated, annealed doped area comprises an impurity selected from the group consisting of an n-type impurity and a p-type impurity.

39. (Currently amended) An intermediate structure in the formation of an isolation structure for a semiconductor device, comprising:
a semiconductor substrate having at least a portion free of field oxide structures and having a first surface and a second surface, said first surface opposing said second surface;
at least one activated, annealed first doped area on said ~~substrate~~ first surface of said substrate;
at least one activated, annealed second, differently doped area within said at least one first doped area; and
a substantially dopant-free, uninterrupted diffusion barrier layer extending over said first surface and said second surface of said semiconductor substrate, said substantially dopant-free, uninterrupted diffusion barrier layer encapsulating said semiconductor substrate.

40. (Currently amended) The structure of ~~claim 39~~ claim 39, further comprising a layer of oxide between said ~~substrate~~ first surface of said substrate and said substantially dopant-free, uninterrupted diffusion barrier layer.

41. (Cancelled)

42. (Cancelled)

43. (Previously presented) The structure of claim 39, wherein said substantially dopant-free, uninterrupted diffusion barrier layer comprises one of the group consisting of silicon nitride and silicon oxynitride.

44. (Previously presented) The structure of claim 39, wherein said at least one activated, annealed first doped area comprises a p-type impurity and said at least one activated, annealed second, differently doped area comprises an n-type impurity.

45. (Previously presented) The structure of claim 39, wherein said at least one activated, annealed first doped area comprises an n-type impurity and said at least one activated, annealed second, differently doped area comprises a p-type impurity.

46. (Previously presented) An intermediate structure useful in the formation of electrical device isolation structures, comprising:
a semiconductor substrate having at least a portion that is free of field oxide structures and includes a first surface and a second surface, said first surface opposing said second surface;
at least one p-well and at least one n-well defined on said first surface of said substrate;
at least one activated, annealed p-type area defined within said at least one n-well and at least one activated, annealed n-type area defined within said at least one p-well; and
a substantially dopant-free, uninterrupted diffusion barrier layer extending over said first surface and said second surface, said substantially dopant-free, uninterrupted diffusion barrier layer encapsulating said semiconductor substrate.

47. (Currently amended) The structure of ~~claim 46~~ claim 46, further comprising a layer of oxide between said first surface and said substantially dopant-free, uninterrupted diffusion barrier layer.

48. (Previously presented) The structure of claim 46, wherein said substantially dopant-free, uninterrupted diffusion barrier layer is silicon nitride.

49. (Previously presented) The structure of claim 46, wherein said substantially dopant-free, uninterrupted diffusion barrier layer is silicon oxynitride.
